Disclosures
\[Abstract\]](#)**3. FAIR VALUE MEASUREMENTS**

We perform fair value measurements in accordance with FASB Accounting Standards Codification (ASC) 820, *Fair Value Measurement*. ASC 820 defines fair value as the price that would be received from selling an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. When determining fair value measurements for assets and liabilities required to be measured at fair value, we consider the principal or most advantageous market in which we would transact and consider assumptions that market participants would use when pricing the assets or liabilities, including inherent risk, transfer restrictions and risk of nonperformance.

ASC 820 establishes a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. An asset or liability's categorization within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. ASC 820 establishes three levels of inputs that may be used to measure fair value:

- Level 1: quoted prices in active markets for identical assets or liabilities;
- Level 2: inputs other than Level 1 that are observable, either directly or indirectly, such as quoted prices in active markets for similar assets or liabilities, quoted prices for identical assets or liabilities in markets that are not active, or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities; or
- Level 3: unobservable inputs that are supported by little or no market activity and that are significant to the fair value measurement of assets or liabilities.

Assets and Liabilities Measured at Fair Value on a Recurring Basis

Our assets and liabilities measured at fair value on a recurring basis consisted of the following (Level 1 and Level 2 inputs are shown above):

(in millions)	November 30, 2022			May 31, 2022	
	Fair Value Measurements Using Input Types			Fair Value Measurements Using Input Types	
	Level 1	Level 2	Total	Level 1	Level 2
Assets:					
Money market funds	\$ 460	\$ —	\$ 460	\$ 12,842	\$ —
Time deposits and other	170	376	546	240	280
Commercial paper debt securities	—	10	10	—	—
	—	110	110	—	—

Derivative financial instruments							
Total assets	\$	630	\$	496	\$1,126	\$ 13,082	\$ 280
Liabilities:							
Derivative financial instruments	\$	—	\$	148	\$ 148	\$ —	\$ 97

Our marketable securities investments consist of money market funds, time deposits and certain other securities. Marketable securities are presented per our condensed consolidated balance sheets including securities with original maturities at the time of purchase greater than three months and the remainder of the debt securities were in cash and cash equivalents. We classify our marketable debt securities as available-for-sale debt securities at the time of purchase and we reevaluate such classification as of each balance sheet date. As of November 30, 2022 and May 31, 2022, all of our marketable securities investments mature within one year. Our valuation techniques used to measure the fair values of our instruments that were classified as Level 1 in the table above were derived from quoted market prices in active markets for these instruments that exist. Our valuation techniques used to measure the fair values of Level 2 instruments in the table above were derived from the following: non-binding broker consensus prices that were corroborated by observable market data, quoted market prices for similar instruments, or pricing models using discounted cash flow techniques, with all significant inputs corroborated from or corroborated by observable market data including reference yield curves, among others.

Based on the trading prices of the \$89.0 billion and \$75.9 billion of senior notes and other borrowings and the related fair value hedges we had outstanding as of November 30, 2022 and May 31, 2022, respectively, the estimated fair values of the senior notes and other borrowings and the related fair value hedges using Level 2 valuation techniques as of November 30, 2022 and May 31, 2022 were \$78.7 billion and \$67.0 billion, respectively.
